**Attachments:** 6.\_14-dioxane\_draft\_supplemental\_file\_consumer\_exposure\_assessment\_modeling\_input\_parameters\_0.xlsx

The modeling inputs are all contained in the supplemental file entitled "Consumer Exposure Assessment Modeling Input Parameters," which is in the public docket. I've attached it here for your reference. You are correct that the dish soap values are taken from an OCA 2009 report.

Please let us know if you have any other questions.

Cindy

I missed this one and have been out of the office. Is there a way you could check with Stephanie and is it possible to respond to Steve? I have included Steve on this message. I don't think we want to create new work, but is there a way to provide the reference from existing documents?

Thanks, doug

Doug,

I cannot find a reference in the Supplemental as to where the concentrations of consumer product inputs concentrations originate. I think the values, at least for Dish Soap, come from an Organic Consumers Association report circa 2009 but could not verify (referenced here - <https://www.organicconsumers.org/news/carcinogen-expert-david-steinman-speaks-press-event-unveiling-ocas-new-study-assessing-14>). Can you enlighten accordingly?

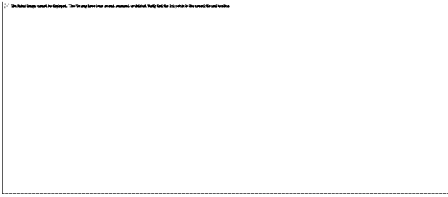

Thanks

**Subject:** Commenting on 1,4-dioxane

The team asked me to double check and confirm that you plan to submit comments to the docket before it closes. Just want to make sure everything is underway. Please let us know if there are any additional questions for our team.

Thanks, doug
